Engineering graduate with a solid foundation in quantitative data analysis, algorithmic problem-solving, and system optimization. Combines a technical mindset with a strong interest in digital product dynamics, focused on leveraging data-driven insights to understand user interactions and drive product growth.

## Education

**2021–2026 B.Sc. Control & Automation Engineering, Istanbul Technical University**

## Experience

**2025 November - 2026 January**

*ABB, Istanbul*
**Motion Business Intern** Conducted comprehensive competitive analysis and market research within ABB Motion Business to evaluate product positioning, target user personas, and technical differentiation. Gathered, structured, and analyzed operational requirements from internal sales teams and stakeholders to support user-centric solution design. Successfully bridged the gap between engineering capabilities and commercial user strategies.

**2025 July - August**

*CSCRS, Istanbul*
**Data & Machine Learning Intern** Collaborated in a cross-functional duo to conduct extensive secondary research and literature reviews on complex environmental and behavioral datasets. Synthesized qualitative and quantitative findings from geospatial and academic sources to define framework architectures. Translated dense academic and environmental insights into structured, actionable, and data-driven project requirements.

**2024 July - August**

*Sensemore, Istanbul*
**IoT Data Analytics Intern** Extracted behavioral patterns and mechanical anomalies from high-frequency vibration telemetry using Fast Fourier Transform (FFT) and time-series signal processing. Developed Python (NumPy, SciPy) algorithmic models to classify system state deviations, reducing predictive maintenance error rates.

**2023 May - October**

*UZMAR ASTeam, ITU Electrical Machines Laboratory*
**Systems & Control Developer** Modeled real-time state estimation and closed-loop control dynamics for an autonomous vessel using ROS. Analyzed trajectory telemetry to isolate positional deviations and steady-state error, mathematically tuning feedback parameters to optimize path stability.

## Projects

**2026 February**

*Product Case Study*
**A/B Test Metric & Retention Modeling: Puzzle Games** Modeled cohort retention curves using logarithmic regression ($r(d) = \alpha + \beta \ln(d)$) across D1–D28 to project DAU and cumulative revenue under baseline and dynamic ARPDAU spike scenarios. Evaluated trade-offs between Variant B's early retention advantage versus Variant A's long-tail stability, while deconstructing core mechanics and LiveOps event architectures across top casual puzzle titles.

**2026 July**

*Product Case Study*
**Product & Economy Teardown: Match Squad** Analyzed core loops, virtual currency dynamics, and IAP ladder through level 374. Logged 100 levels to model difficulty metrics. Designed a bounded retaliation mechanic to lift D7 retention and sessions/DAU with churn guardrails.

## Core Competencies & Technical Skills

| | |
|---|---|
| **Data & Programming:** | Python (NumPy, Matplotlib), SQL (basics), MATLAB |
| **AI Tools & Productivity:** | Agentic AI Workflows, LLM-Assisted Research & Analysis, Microsoft Office (Excel, PowerPoint, Word), LaTeX |
| **Languages:** | Turkish (Native), English (B2 - Professional Working), Finnish (A1) |

## Interests

**Orienteering & Competitive Athletics** Member of the university orienteering team, leveraging spatial navigation, high-pressure decision making, and endurance skills in country-wide competitions.

**Scuba Diving** PADI Autonomous Diver certified (ISO 24801-2 Level 2); skilled in underwater mapping and safety communication protocols.
